

What is School Climate?

School climate is a term we use to describe the quality and character of school life. When we think about school climate, we're generally thinking about three main areas: safety, relationships, and school quality.

Safety

How physically and emotionally safe do people feel?

Relationships

How do people treat each other at school?

School Quality

How well does the school support diversity, offer high quality teaching, and foster a sense of school pride?

Taken together, all of these areas represent your school's climate.

FAST FACTS

- Every school is unique.
- All schools have strengths and weaknesses.
- School climate can be changed! Schools can improve over time, as can how students feel at school.
